

HALF OF IBS PATIENTS SURVEYED REPORT IBS SYMPTOMS MORE CHALLENGING TO MANAGE IN THE PAST YEAR

April 04, 2022

LAVAL, Quebec, April 4, 2022 /PRNewswire/ -- Bausch Health Companies Inc. (NYSE/TSX: BHC) ("Bausch Health") and its gastroenterology (GI) business, Salix Pharmaceuticals ("Salix"), one of the largest specialty pharmaceutical companies in the world committed to the prevention and treatment of gastrointestinal diseases and disorders, today released the results from the second edition of its Patient Perspectives Survey, an annual survey of U.S adults living with irritable bowel syndrome (IBS) or chronic idiopathic constipation (CIC). The current report, Patient Perspectives: Living with IBS Now, offers a current understanding of the behaviors and experiences of the IBS and CIC patient population in the past year (February 2021 – February 2022), including insights on diagnosis and symptom management. Most notably, almost half (49%) of respondents found their IBS or CIC symptoms have been more challenging to manage during the last 12 months. The report, which was developed based on a nationwide survey conducted in partnership with the Fairleigh Dickinson University Poll (FDU Poll), also addresses gaps in symptom management and reporting, and barriers to effective treatment. The survey also reveals trends in patient-provider communications.

"Salix remains committed to delivering impactful resources that inform the entire IBS and CIC community and address the needs of both patients and health care providers," said Robert Spurr, president, Salix. "The findings of this year's report illustrate a need for more meaningful health care provider visits to help improve clinical outcomes. As many as 3.5 million annual health care provider visits for IBS take place in the U.S. each year¹, and it is our hope that this research will encourage productive dialogue and a collaborative approach to symptom management and guideline-based treatment options during these visits."

Key findings from the report include:

- Overall, 45% of patients acknowledged they began experiencing IBS or CIC symptoms within the last 24 months
- More than three out of four patients surveyed report that several of their IBS or CIC symptoms included in the survey have not improved or have worsened over the last 12 months (between 77% and 81% of respondents)

- 92% of HCP-diagnosed patients surveyed were initially diagnosed with IBS or CIC during an in-person appointment with their health care provider
- More than half (61%) of patients chose in-person visits as their preferred method of communication with the health care provider who treats their IBS or CIC
- When meeting with their health care provider, 40% of patients shared they only discuss their main IBS or CIC-related symptom, rather than discussing all IBS or CIC-related symptoms
- Nearly one-third (29%) of patients were not offered a prescription medicine to treat symptoms upon diagnosis of their IBS or CIC

About the Methodology Behind *Patient Perspectives: Living with IBS Now*

Data is from a non-probability online sample of U.S. residents and was carried out in February 2022 by Fairleigh Dickinson University's FDU Poll. Participants were recruited based on previously reported gastrointestinal issues. The overall sample size of the survey was 728 respondents and was screened to include only those who self-reported having IBS with constipation, chronic idiopathic constipation or IBS with diarrhea. Respondents were drawn from multiple panels of U.S. residents and were compensated for their time (maximum \$5.00). Due to the limitations of this survey, results may not be representative of the general IBS or CIC population.

About Fairleigh Dickinson University

Since 2001, Fairleigh Dickinson University's FDU Poll has conducted survey research on issues of public importance. Utilizing best practices in survey methodology, FDU Poll produces authoritative statewide and national public polling. In addition, FDU Poll engages in research for corporate, non-profit and government entities. As a charter member of the American Association for Public Opinion Research's Transparency Initiative, the FDU Poll is devoted to building public confidence in polling by embracing the open science of survey research.

About Salix

Salix Pharmaceuticals is one of the largest specialty pharmaceutical companies in the world committed to the prevention and treatment of gastrointestinal diseases.
