

Salix to Present Late-Breaking Data from Phase 2 Trial of Amiselimod in Active Ulcerative Colitis at Digestive Disease Week 2024

May 17, 2024

LAVAL, Quebec, May 17, 2024– Bausch Health Companies Inc. (NYSE/TSX: BHC) and its gastroenterology (GI) business, Salix Pharmaceuticals, today announced that they will be presenting data from its Phase 2 trial evaluating Amiselimod as treatment for active ulcerative colitis (UC). The data will be presented at Digestive Disease Week (DDW) 2024 during the IMIBD Late Breakers and Innovations in IBD session on Sunday, May 19, 2024, in Washington, D.C.

"We are pleased to present late-breaking data on Amiselimod, our investigational, oral, sphingosine 1- phosphate (S1P) receptor modulator as a potential treatment for the induction of remission in UC," said Tage Ramakrishna, M.D., Chief Medical Officer and President of Research & Development, Bausch Health. "The abstract underscores our steadfast commitment to developing new and innovative therapies for patients with UC."

The research to be featured at DDW 2024 and available via the meeting's online platform is as follows:

- Hanauer, Stephen B. et al. "Amiselimod for the treatment of active ulcerative colitis: a randomized, double-blind, placebo-controlled trial" Abstract #4094796

The Phase 2 clinical trial was a 12-week, double-blind, placebo-controlled, randomized, dose ranging study to evaluate the efficacy and safety of Amiselimod in 320 patients with mildly-to-moderately active UC. Bausch Health announced

from this study in December 2023.

About Amiselimod

Amiselimod is a sphingosine-1-phosphate (S1P) receptor functional antagonist and, by inhibiting the receptor function of the lymphocyte sphingosine-1-phosphate (S1P) receptor, retains lymphocytes sequestered in the lymph nodes and prevents them from contributing to autoimmune reactions.¹ Due to this mechanism of action, Amiselimod may potentially be useful for various autoimmune diseases.² Affinity to S1P1 and S1P5 receptor subtypes, suggests that Amiselimod could potentially have a more pronounced effect on ulcerative colitis related inflammation than compounds with restricted activity on S1P1 receptor subtype exclusively or combined activity on S1P1 and S1P5.³

About Salix

Salix Pharmaceuticals is one of the largest specialty pharmaceutical companies in the world committed to the prevention and treatment of gastrointestinal diseases. For more than 30 years, Salix has licensed, developed, and marketed innovative products to improve patients' lives and provide health care providers with life-changing solutions for many chronic and debilitating conditions. Salix currently markets its product line to U.S. health care providers through an expanded sales force that focuses on gastroenterology, hepatology, pain specialists, and primary care. Salix is headquartered in Bridgewater, New Jersey. For more information about Salix, visit
