

Salix Announces Issuance of an Additional XIFAXAN® Patent

October 31, 2019

LAVAL, Quebec, Oct. 31, 2019 /PRNewswire/ -- Bausch Health Companies Inc. (NYSE/TSX: BHC) ("Bausch Health" or the "Company") and its gastroenterology business, Salix Pharmaceuticals, ("Salix"), one of the largest specialty pharmaceutical companies in the world committed to the prevention and treatment of gastrointestinal diseases, announced that the U.S. Patent and Trademark Office has issued an additional patent covering the use of XIFAXAN® (rifaximin) 550 mg tablets to treat symptoms of Irritable Bowel Syndrome (IBS). The patent issued is United States Patent No. 10,456,384, entitled "Methods for Treating Irritable Bowel Syndrome (IBS)." Final expiry of the new patent covering IBS is in February 2029.

"We have always been confident in the strength of the XIFAXAN patents, and the addition of this new patent specific to the treatment of IBS further strengthens our XIFAXAN intellectual property," said Joseph C. Papa, chairman and CEO, Bausch Health. "We will continue to vigorously defend our intellectual property."

XIFAXAN is now protected by 23 patents covering the composition of matter and the use of XIFAXAN listed in the FDA's Approved Drug Products with Therapeutic Equivalence Evaluations, or the Orange Book.

About XIFAXAN

XIFAXAN (rifaximin) 550 mg tablets are indicated for the treatment of irritable bowel syndrome with diarrhea (IBS-D) in adults and for the reduction in risk of overt hepatic encephalopathy (HE) recurrence in adults.

IMPORTANT SAFETY INFORMATION

- XIFAXAN is contraindicated in patients with a hypersensitivity to rifaximin, rifamycin antimicrobial agents, or any of the components in XIFAXAN. Hypersensitivity reactions have included exfoliative dermatitis, angioneurotic edema, and anaphylaxis.
- *Clostridium difficile*-associated diarrhea (CDAD) has been reported with use of nearly all antibacterial agents, including XIFAXAN, and may range in severity from mild diarrhea to fatal colitis. If CDAD is suspected or confirmed, ongoing antibiotic use not directed against *C. difficile* may need to be discontinued.
- There is an increased systemic exposure in patients with severe (Child-Pugh Class C) hepatic impairment. Caution should be exercised when administering XIFAXAN to these patients.
- Caution should be exercised when concomitant use of XIFAXAN and P-glycoprotein (P-gp) and/or OATPs inhibitors is needed. Concomitant administration of cyclosporine, an inhibitor of P-gp and OATPs, significantly increased the systemic exposure of rifaximin. In patients with hepatic impairment, a potential additive effect of reduced metabolism and concomitant P-gp inhibitors may further increase the systemic exposure to rifaximin.
- In clinical studies, the most common adverse reactions for XIFAXAN in IBS-D ($\geq 2\%$) were nausea (3%) and ALT increased (2%).
- In clinical studies, the most common adverse reactions for XIFAXAN in HE ($\geq 10\%$) were peripheral edema (15%), nausea (14%), dizziness (13%), fatigue (12%), and ascities (11%).

- INR changes have been reported in patients receiving rifaximin and warfarin concomitantly. Monitor INR and prothrombin time. Dose adjustment of warfarin may be required.
- XIFAXAN may cause fetal harm. Advise pregnant women of the potential risk to a fetus. To report SUSPECTED ADVERSE REACTIONS, contact Salix Pharmaceuticals at 1-800-321-4576.

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch, or call 1-800-FDA-1088.
